- **EXPLANATION OF P-IDM SCHEMA FOR DESIGN MOCK-UP:**
- In our project we decide to add an additional page that include Contacts and Where we are in one single page,beacause we think it is useful for the user.

- We use a local landmark and a filter,we represent them through 2 different symbols as you can see in the P-IDM schema

- In our mock-up ,in particular in category of Services we decide to develop in detail just the section TV & Entertainment ,because it contains many others subcategories .We devolop also the other categories of Services but not with the same level of detail.

- We realize the transition pages just for the Samsung Galaxy s6(you can find it in the category of devices,Smartphone & Tablet)to show how they works,but we didn't realize them for the other devices. Anyway we put the links also in the other devices, but the links will led you always to the same transition pages.

- We did the same thing also for the forms,in fact there's the form to buy a service or a new device,but we made it just for one smartphone(Galaxy S6) and one service(Quotidiani).The page are accessible also form other devices and service but if you try to go back they will led you always to the same pages.
